

Emergency mode (Tuner)

The Emergency mode (Tuner) enables you to use the internal antenna tuner in an emergency situation, but limits the maximum output power to 50 W.

In an emergency situation, where the only antenna you have has a high SWR, you can use the antenna tuner even if the SWR is more than 3:1.

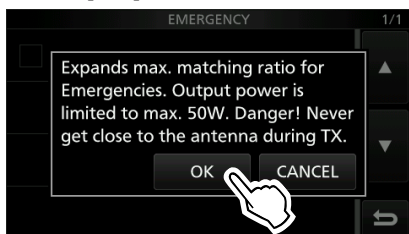

1. Open the EMERGENCY screen.

MENU » **SET > Others > Emergency**

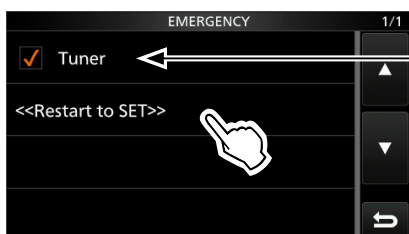

2. Touch "Tuner."

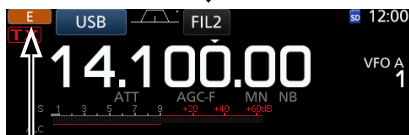

3. Touch [OK].

4. Touch "<<Restart to SET>>" to restart the transceiver.

"✓" is inserted.

- The transceiver enters the Emergency mode (Tuner).

- E** : Displayed when the internal antenna tuner is OFF.
- E-TUN** : Blinks while tuning.
- E-TUN** : Displayed when the internal antenna tuner is ON.
